HOSPITAL OPERATIONS & NABH QUALITY INDICATORS

Power BI Project Report | Actual Dashboard Screenshots, KPI Explanation & DAX

Source: User-uploaded 5-page Power BI dashboard PDF

This report uses the real dashboard pages supplied by the user. KPI values and dashboard labels are described as shown in the source PDF; no sample dashboard screenshots have been substituted.

Project area	What the dashboard covers
Hospital Operations & Revenue	Admissions/discharges, revenue billed/collected/outstanding, collection rate, OPD waiting time, patient feedback and insurance claim status.
NABH Quality Indicators	13 primary indicators, actual vs target compliance, department-wise indicator catalogue and compliance gap.
Patient Safety & Infection Control	Incidents, staff training, equipment calibration, biomedical waste, fire safety and indicator-level compliance.
Internal Audit & Compliance	Audit status, major/minor non-compliance findings, RCA progress, CAPA status and department-wise follow-up.

Report use: portfolio documentation and interview explanation. The DAX examples below explain KPI logic and should be checked against the exact measures in the PBIX/PBIP model before describing them as the original formulas.

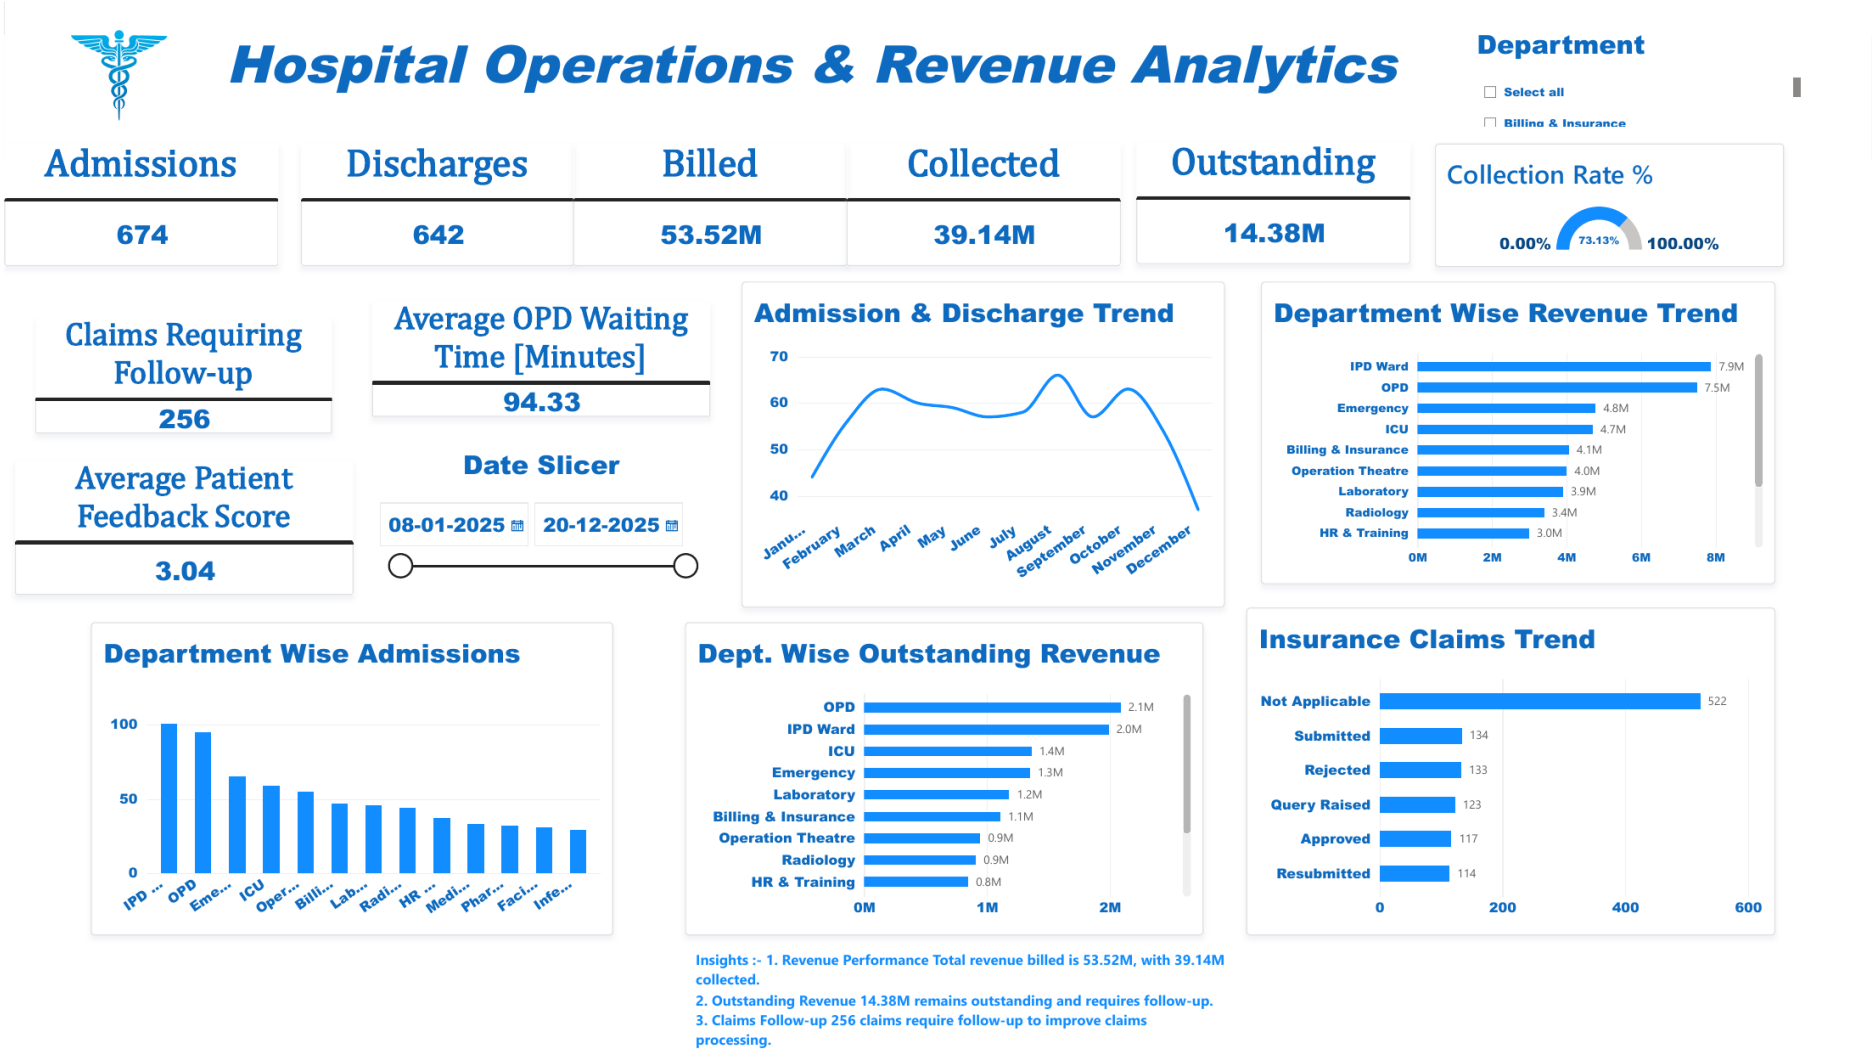

1. Executive Overview

The overview page brings together admission/discharge volume, audit/RCA/CAPA summary, non-compliance findings, department-wise admissions and RCA/CAPA, equipment calibration status, staff training status and quality-indicator distribution. The displayed KPI cards show Admissions 712, Discharges 679, Total Audits about 1.2K, RCA about 1.2K, CAPA about 1K and 469 non-compliance findings.

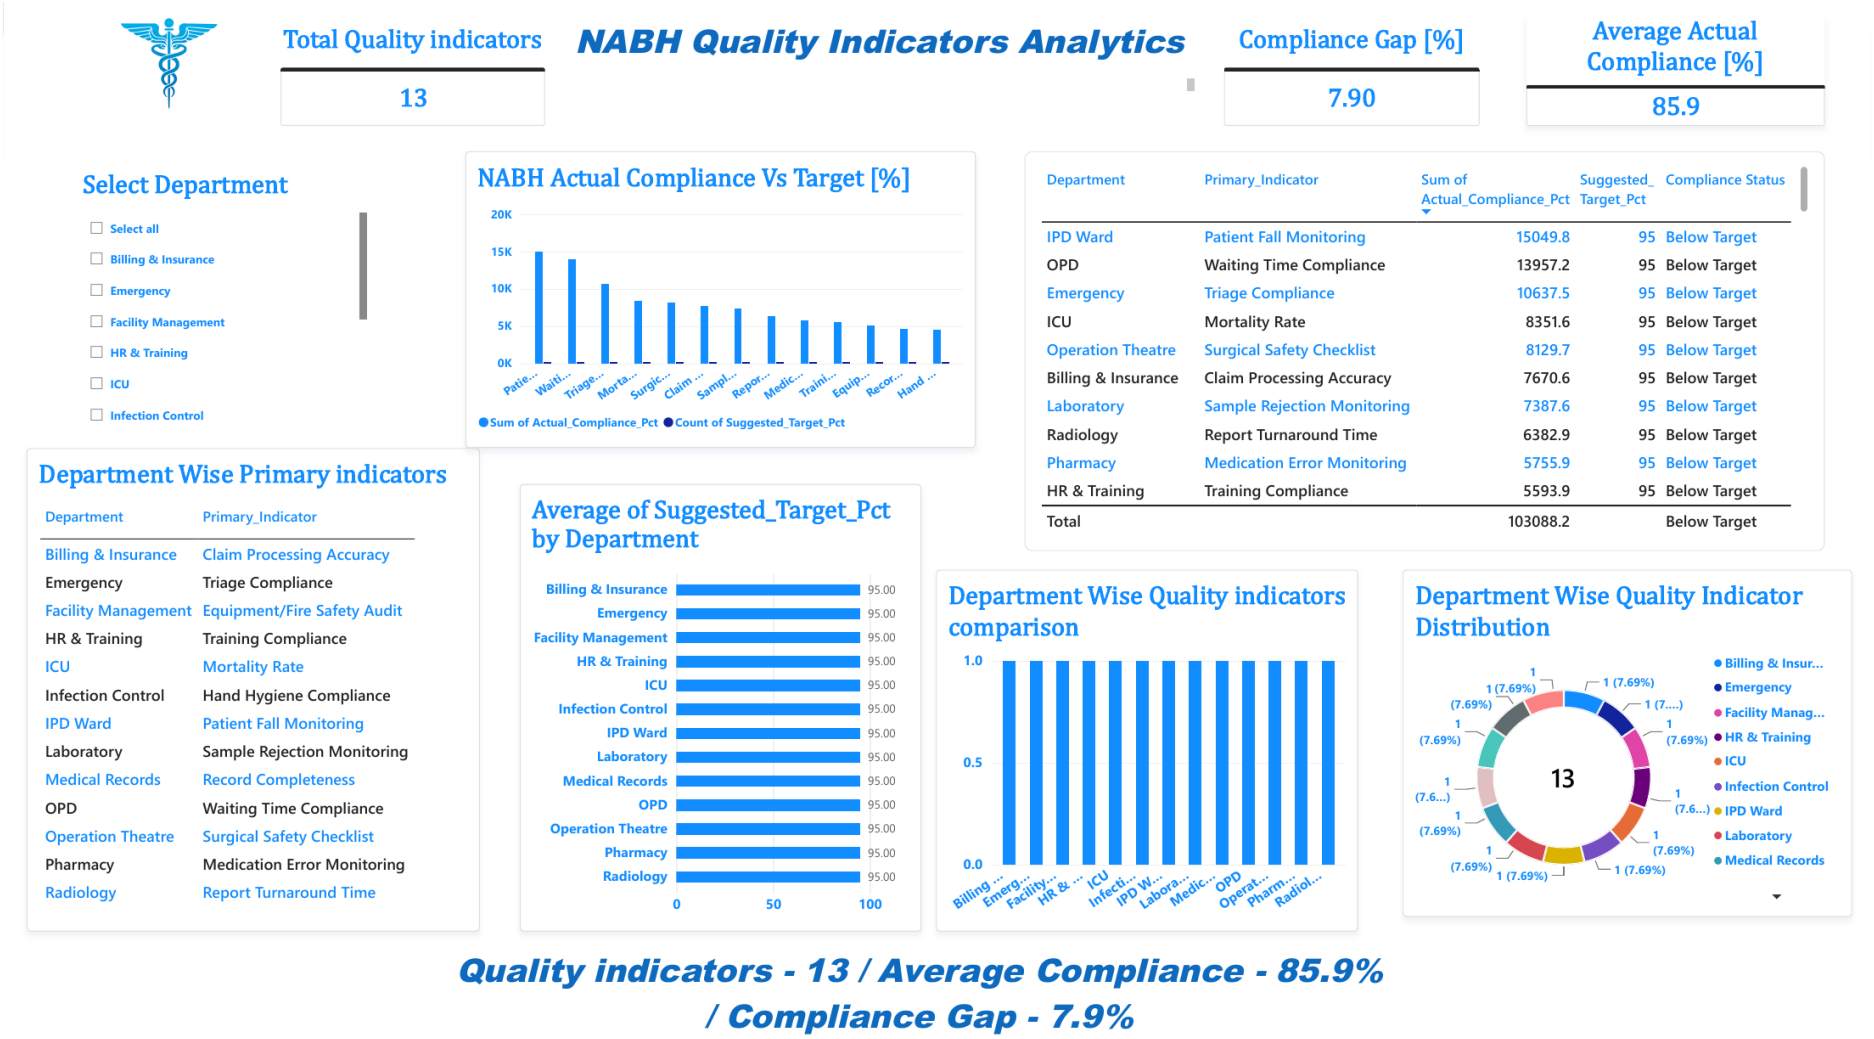

2. Hospital Operations & Revenue Analytics

This page shows Admissions 674, Discharges 642, Billed 53.52M, Collected 39.14M, Outstanding 14.38M, and 256 claims requiring follow-up. Average OPD waiting time is shown as 94.33 minutes and average patient feedback score as 3.04. The insights printed on the source dashboard highlight revenue collection, outstanding follow-up and claims follow-up.

3. NABH Quality Indicators Analytics

The page shows 13 total quality indicators, average actual compliance 85.9 and a compliance gap of 7.90. The target shown across departments is 95%. The comparison table currently shows indicators as Below Target. The source chart's summed actual compliance values appear much larger than percentages, so confirm aggregation and field data types before presenting those chart values as percentages.

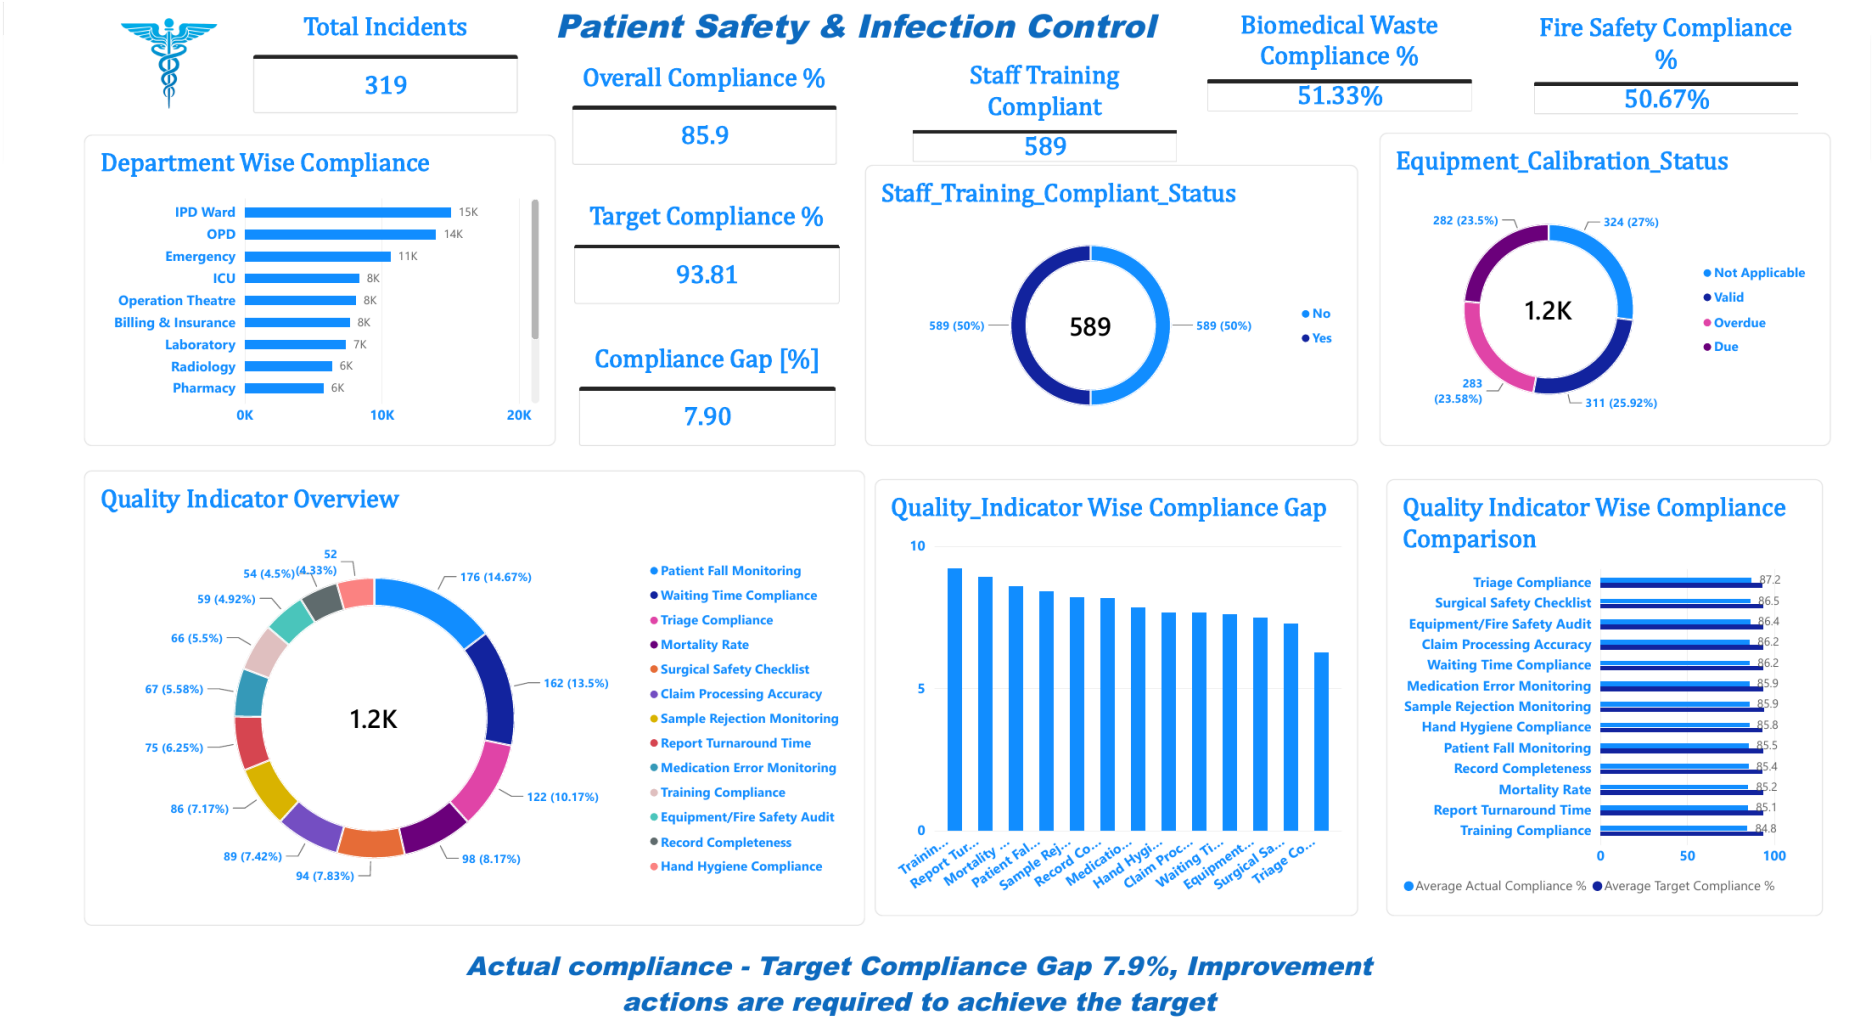

Department	Primary_Indicator	Sum of Actual_Compliance_Pct	Suggested_ Target_Pct	Compliance Status
IPD Ward	Patient Fall Monitoring	15049.8	95	Below Target
OPD	Waiting Time Compliance	13957.2	95	Below Target
Emergency	Triage Compliance	10637.5	95	Below Target
ICU	Mortality Rate	8351.6	95	Below Target
Operation Theatre	Surgical Safety Checklist	8129.7	95	Below Target
Billing & Insurance	Claim Processing Accuracy	7670.6	95	Below Target
Laboratory	Sample Rejection Monitoring	7387.6	95	Below Target
Radiology	Report Turnaround Time	6382.9	95	Below Target
Pharmacy	Medication Error Monitoring	5755.9	95	Below Target
HR & Training	Training Compliance	5593.9	95	Below Target
Total		103088.2		Below Target

Quality indicators - 13 / Average Compliance - 85.9% / Compliance Gap - 7.9%

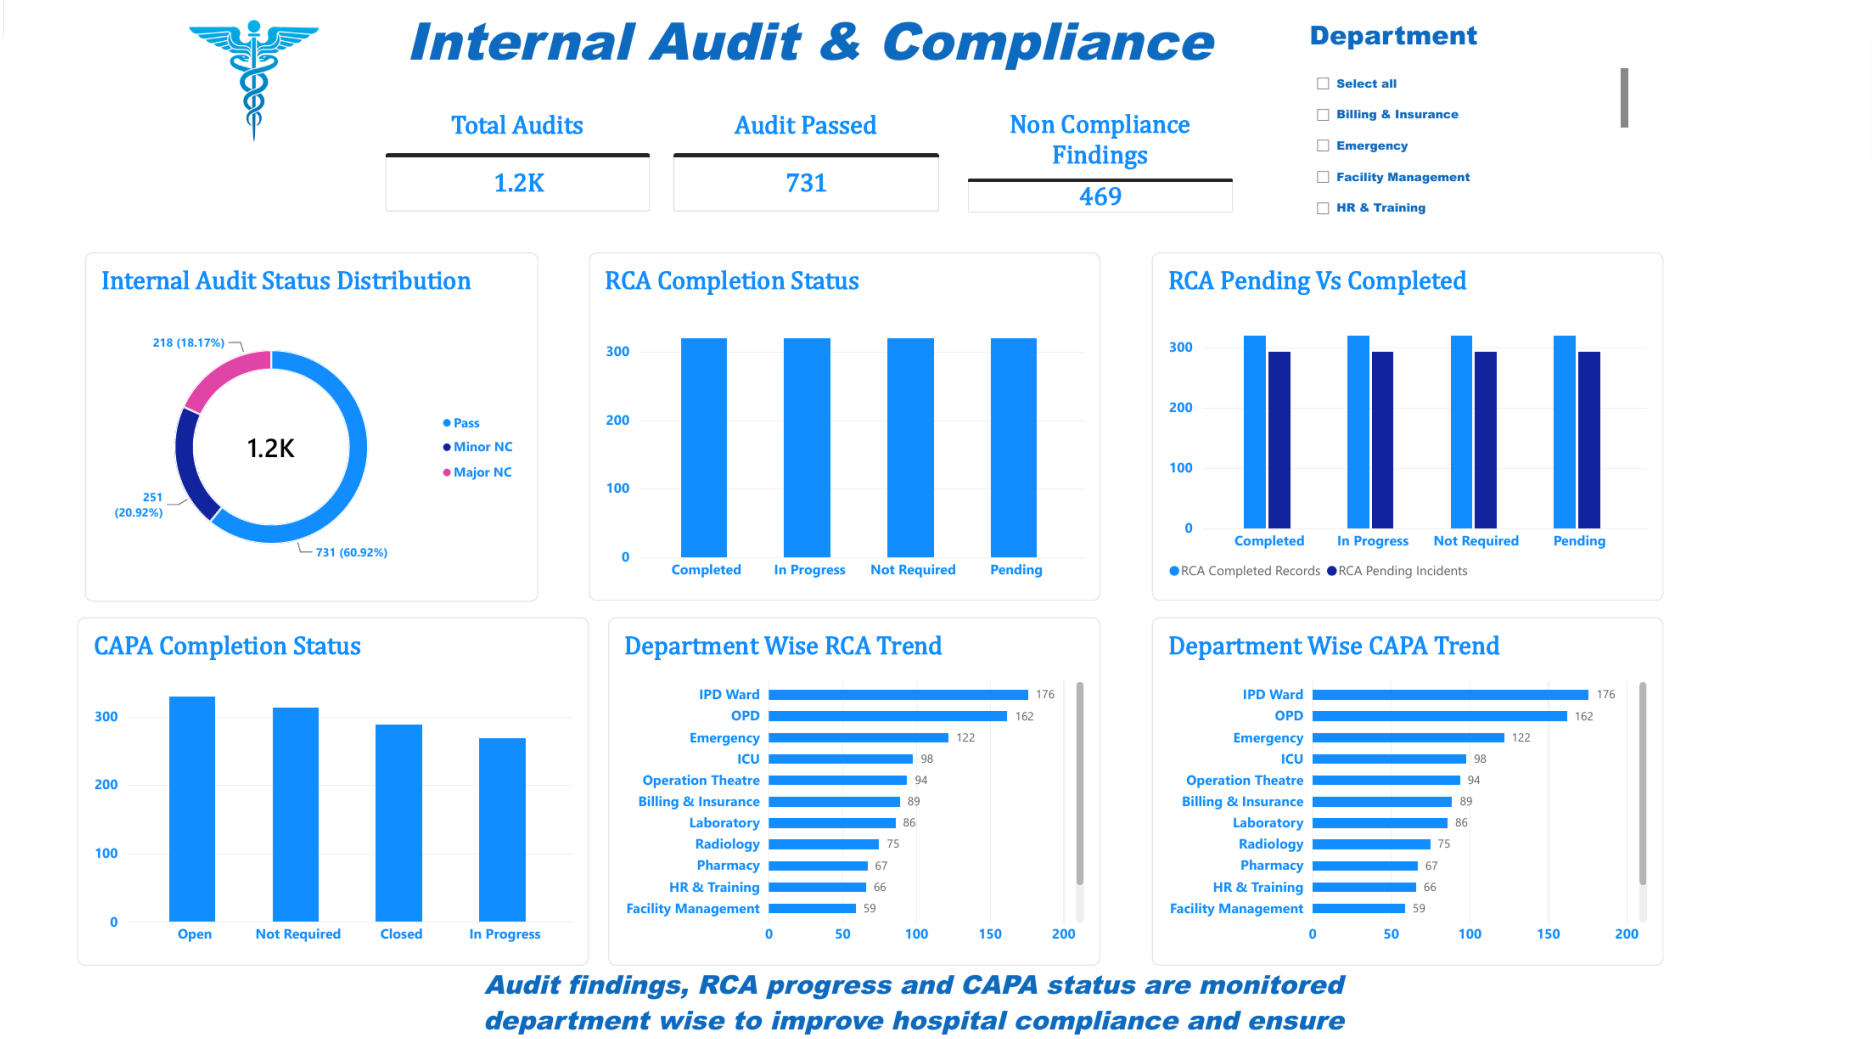

4. Patient Safety & Infection Control

The page shows Total Incidents 319, Overall Compliance 85.9%, Target Compliance 93.81 and Compliance Gap 7.90. It includes staff-training status, equipment calibration status, biomedical waste, fire-safety compliance and indicator-wise compliance gap/comparison. The gap indicates improvement actions are needed to reach the target.

5. Internal Audit & Compliance

The page shows Total Audits about 1.2K, Audit Passed 731 and Non Compliance Findings 469. Audit status distribution includes Pass, Minor NC and Major NC. Additional visuals track RCA completion/pending and CAPA completion status by department. Use this page to discuss follow-up of findings, RCA and corrective/preventive action.

6. KPI Definitions & DAX Explanation

These are readable DAX examples for the KPIs shown in the report. They explain the calculation logic; verify table/column names and compare with the model's original measures before calling them the exact formulas used in the dashboard.

Admissions

```
Admissions = SUM('Hospital_Operations'[Admission_Count])
```

Adds the admission count within the selected date/department filters.

Discharges

```
Discharges = SUM('Hospital_Operations'[Discharge_Count])
```

Adds the discharge count in the current filter context.

Total Revenue Billed

```
Total Revenue Billed = SUM('Hospital_Operations'[Revenue_Billed_INR])
```

Adds billed revenue.

Total Revenue Collected

```
Total Revenue Collected = SUM('Hospital_Operations'[Revenue_Collected_INR])
```

Adds collected revenue.

Outstanding Revenue

```
Outstanding Revenue = SUM('Hospital_Operations'[Outstanding_INR])
```

Adds outstanding revenue that may require follow-up.

Collection Rate %

```
Collection Rate % = DIVIDE([Total Revenue Collected], [Total Revenue Billed], 0) * 100
```

Collected divided by billed. Check whether the visual expects a percentage-formatted decimal; if so, remove * 100.

Claims Requiring Follow-up

```
Claims Requiring Follow-up = CALCULATE(COUNTROWS('Hospital_Operations'), 'Hospital_Operations'[Insurance_Claim_Status] IN {"Submitted", "Query Raised", "Rejected",
"Resubmitted"})
```

Counts claims in selected statuses; confirm business definition of follow-up with the source workflow.

Average OPD Waiting Time

```
Average OPD Waiting Time = AVERAGE('Hospital_Operations'[OPD_Wait_Time_Min])
```

Calculates average wait time in minutes.

Average Patient Feedback

```
Average Patient Feedback = AVERAGE('Hospital_Operations'[Patient_Feedback_Score])
```

Calculates the average feedback score.

Average Actual Compliance %

```
Average Actual Compliance % = AVERAGE('Hospital_Operations'[Actual_Compliance_Pct])
```

Averages actual compliance values; confirm whether source values are 0–100 or 0–1.

Average Target Compliance %

```
Average Target Compliance % = AVERAGE('Hospital_Operations'[Target_Compliance_Pct])
```

Averages target compliance values.

Compliance Gap %

```
Compliance Gap % = [Average Target Compliance %] - [Average Actual Compliance %]
```

Positive gap means actual compliance is below target, provided both measures use the same scale.

Total Incidents

```
Total Incidents = COUNTROWS(FILTER('Hospital_Operations', NOT ISBLANK('Hospital_Operations'[Incident_Type])))
```

Counts rows with an incident type; confirm whether one row represents one incident.

Total Audits

```
Total Audits = COUNTROWS('Hospital_Operations')
```

This is only valid if each row represents one audit record. Otherwise use a distinct audit ID.

Audit Passed

```
Audit Passed = CALCULATE(COUNTROWS('Hospital_Operations'), 'Hospital_Operations'[Audit_Result] = "Pass")
```

Counts rows marked Pass; confirm row grain.

Non Compliance Findings

```
Non Compliance Findings = CALCULATE(COUNTROWS('Hospital_Operations'), 'Hospital_Operations'[Audit_Result] IN {"Major NC", "Minor NC"})
```

Counts rows with major or minor non-compliance status.

RCA Completed

```
RCA Completed = CALCULATE(COUNTROWS('Hospital_Operations'), 'Hospital_Operations'[RCA_Status] = "Completed")
```

Counts rows with completed RCA status.

RCA Pending

```
RCA Pending = CALCULATE(COUNTROWS('Hospital_Operations'), 'Hospital_Operations'[RCA_Status] = "Pending")
```

Counts rows marked Pending. Add other in-progress states if required by your workflow.

CAPA Open / In Progress

```
CAPA Open or In Progress = CALCULATE(COUNTROWS('Hospital_Operations'), 'Hospital_Operations'[CAPA_Status] IN {"Open", "In Progress"})
```

Counts CAPA actions not yet closed; adjust status labels to match actual data.

7. Data Model, Filters & User Interaction

• Date slicer on the operations page supports period-level trend analysis.

• Department slicers support comparisons and investigation by department.

• Trend visuals support admissions/discharges over time and revenue/claims monitoring.

• Quality indicator tables compare actual compliance with suggested target values.

• Audit visuals track status distribution and department-wise RCA/CAPA follow-up.

8. Key Insights from the Actual Dashboard

• Revenue: ■53.52M billed, ■39.14M collected and ■14.38M outstanding; prioritize outstanding-revenue follow-up.

• Claims: 256 claims are marked as requiring follow-up on the operations dashboard.

• Quality: average actual compliance is 85.9 against a displayed target of 95; the reported gap is 7.9 percentage points, subject to confirming scale and formatting.

• Safety: the patient-safety page reports 319 incidents; review incident trends and related controls by department.

• Audit: 731 audit passes and 469 non-compliance findings are shown; prioritize major/minor NC review, RCA completion and CAPA closure.

9. Validation Checks Before Portfolio/Interview Use

• The Executive Overview and Operations page show different admission/discharge totals (712/679 vs 674/642). This may be caused by different filter contexts; explain the difference only after checking slicers and filters.

• Collection Rate appears as 0.00% and 73.13% near the card in the source PDF. Confirm the measure and formatting in Power BI Desktop before reporting one value.

• Quality indicator actual values in the table/chart appear aggregated to large numbers (e.g., 15049.8), while the card shows 85.9. Verify whether the field is being summed rather than averaged.

• Check whether the target is stored as 95 or 0.95 before percentage formatting.

• Confirm whether each Hospital_Operations row is an operation, an audit, an incident, or an indicator record before using COUNTROWS as a count of distinct events.

• The source PDF shows the report in Power BI Desktop with no model source or refresh details. The report therefore explains visible outputs, not hidden model configuration.

10. Resume / Naukri Project Description

Developed a multi-page Hospital Operations and NABH Quality Indicators dashboard in Power BI to monitor admissions/discharges, revenue and collection performance, insurance claim follow-up, department-wise quality compliance, patient-safety controls, and internal audit/RCA-CAPA status. Used DAX measures, interactive date/department slicers, and visual KPI reporting to support operational review and quality-improvement follow-up.
